

ABOUT TOXINZ

TOPICS

- Lists over 190,000 chemicals, chemical products, pharmaceuticals, plants and hazardous creatures
- Includes Australian brand-name products, creatures and plants
- Handles combinations of drugs monographs
- Provides the user with the ability to create custom monographs
- Increases management efficiency and improves patient outcome
- Allows easy search, navigation and printing

HCN is proud to present TOXINZ, the essential online Australasian poisons information database for all health-care professionals including Paramedics, General Practitioners, Emergency Physicians, Intensivists and Pharmacists.

TOXINZ's evidence-based toxicology content is fully referenced and has been peer reviewed by an editorial board of Australia's most skilled and respected clinical toxicologists.

TOXINZ toxicology content is specifically tailored to meet the needs of Australasian users and contains information about more than 190,000 listed chemicals, chemical products, pharmaceuticals, plants and hazardous creatures.

Most household and industrial branded products are listed, so referring to product databases is not required.

For each database entry, the following information is provided:

- Identification information including photographs
- Description including chemical composition and product information
- Intervention criteria including observation period and admission criteria
- Treatment
- Signs and symptoms
- Toxicity and References

The content is continually updated and is fully referenced with direct links to Pubmed abstracts. Images are included to aid identification of plants and animals.

TOXINZ is the comprehensive one-stop resource for the treatment of poisoning.
