

Consultmed now seamlessly integrated with MedicalDirector Clinical

MedicalDirector has partnered with Consultmed to enable GPs to create and send eReferrals seamlessly within MedicalDirector Clinical via the Smartbar. This integration eliminates app-switching and double data entry, facilitating fast, secure and efficient eReferrals.

How does the integration work?

Consultmed integrates seamlessly with MedicalDirector Clinical software via the Smartbar, appearing as a convenient and free in-platform widget.

Unlike other systems, MedicalDirector Clinical keeps GPs within the patient management system, with the integration deeply embedded in the referral workflow – eliminating the need to navigate away.

With Consultmed in MedicalDirector Clinical, GPs can:

- **Create and send secure, trackable eReferrals** without leaving the software
- **Request specialist Advice & Guidance** from participating healthcare networks
- **Attach supporting documents** such as pathology and radiology reports
- **Access a built-in health service and specialist directory**
- **Receive communications directly from specialists**, requesting missing information or offer pre-appointment Advice and Guidance, enabling more coordinated care
- **Receive referral acknowledgements, letters, reports and discharge summaries** straight into the MedicalDirector inbox.

Who benefits?

- **GPs** – Save time and reduce admin with an intuitive, embedded referral workflow.
- **Practice Managers & Admin staff** – Experience less manual handling, better referral tracking and fewer follow-ups.
- **Patients** – Enjoy faster, more reliable referrals and improved continuity of care.

How do I start using the integration?

To begin using the Consultmed integration in MedicalDirector Clinical, simply add the Consultmed widget to your Smartbar and follow setup instructions.
